

WHO IS ACCELLA?

Accella Performance Materials is a leading manufacturer of custom urethane systems, tire-fill systems and recycled rubber products.

Accella Polyurethane Systems produces a wide range of materials that are key components of products such as sports surfacing and insulation products. Accella Tire Fill Systems provides urethane-based, flat-proofing solutions for tires operating in challenging conditions such as mining and construction. Ultimate RB produces a vast array of products made from recycled tires and urethane binders including fitness center flooring, acoustical underlayment and playground safety tiles.

With all three businesses utilizing tremendous amounts of urethane components, our large scale gives us the purchasing power needed to offer our products at the best value. Scale also enables us to have substantial R&D/Technical resources on hand. In fact, Accella has over 30 degreed chemists (including PhDs) currently on staff. These resources combined with numerous ISO 9001-registered manufacturing facilities in the United States, Europe, and Asia uniquely position Accella to provide value to customers in the markets that we serve. We look forward to developing a custom product or solution for you.
