EPDM rubber granules are the surfacing material of choice for running tracks around the world, and Ultimate RB is the only vertically integrated supplier of this material in the United States. With all aspects of formulation and manufacturing conducted in-house in our ISO 9001 registered facility, we can offer product quality and consistency that no competitor can match.

All of our EPDM formulations are peroxide cured to ensure better cross-link density, weathering characteristics, and physical properties. The peroxide cure system also eliminates problems of compatibility with some urethane binders that can be encountered with sulfur cure systems.

While most running tracks are red or black, Ultimate RB has a multitude of colors available for use in this application. We can also develop custom colors per your specification.

In addition to EPDM granules, Ultimate RB can provide one-stop shopping for many track systems through a program jointly offered with our affiliate MarChem Corporation. EPDM granules and urethane binder products can be shipped together on one truck from several locations across the country to ensure timely delivery and reduced shipping costs. We also have recycled SBR in strand form available for sale from our facility in Ohio.
